Monthly Market Outlook

August 2026

by

Prateek Agrawal

MD & CEO

Dear Investor,

In this edition we shall be discussing the following.

- **Higher oil prices and geopolitics keep the focus on emerging themes and potential solutions**
 - ▶ After raising expectations of a resolution to the Mideast conflict, hostilities have again flared up
 - ▶ Higher crude prices drain forex. Currency has weakened
- **Summers are elongated and hot. A cause for concern for some but opportunity for some. Inflation can help government finances**
 - ▶ The peak demand of 265GW was lower than 270.8GW in May'26
 - ▶ Lower monsoons could overall deliver better GDP output on better power demand, better mining production and infra build
- **AI could drive capex over 2026 and 2027 though at a slower pace vs 2025. Delivery of software could emerge in 2027**
 - ▶ Wall Street estimates for annual hyperscaler capex track toward roughly \$725 billion to \$800 billion
 - ▶ Indian companies, particularly MNC subsidiaries should fulfill some of this data center driven demand in networking, generators, gas-based power, etc
- **Indian Equities may continue to offer long-term opportunities relative other Indian asset classes**
 - ▶ India Valuation has corrected and our premium to emerging market equities is at a 10 year low
 - ▶ Banks and IT, two dominant spaces in the large cap indices have seen a strong correction
 - ▶ We have seen the intensity of selling reduce. However, the outlook for net flows remains uncertain
- **It continues to be time for alpha**
 - ▶ Markets move up on account of growth in earnings and cash flows over a period of time
 - ▶ Current period is witnessing high amount of disruption and Value Migration
- **Key Risk**
 - ▶ Flare up in oil prices and large equity fund raising which can put pressure on secondary market outcomes

HOW TO READ A FACTSHEET

Fund Manager

An employee of the asset management company such as a mutual fund or life insurer, who manages investments of the scheme. He is usually part of a larger team of fund managers and research analysts.

Minimum Application Amount

This is the minimum investment amount for a new investor in a mutual fund scheme.

Minimum Additional Purchase Amount

This is the minimum investment amount for an existing investor in a mutual fund scheme.

Yield to Maturity

The Yield to Maturity or the YTM is the rate of return anticipated on a bond if held until maturity. YTM is expressed as an annual rate. The YTM factors in the bond's current market price, par value, coupon interest rate and time to maturity.

SIP

SIP or systematic investment plan works on the principle of making periodic investments of a fixed sum. It works similar to a recurring bank deposit. For instance, an investor may opt for an SIP that invests Rs 500 every 15th of the month in an equity fund for a period of three years.

NAV

The NAV or the net asset value is the total asset value per unit of the mutual fund after deducting all related and permissible expenses. The NAV is calculated at the end of every business day. It is the value at which the investor enters or exits the mutual fund.

Benchmark

A group of securities, usually a market index, whose performance is used as a standard or benchmark to measure investment performance of mutual funds, among other investments. Some typical benchmarks include the Nifty, Sensex, BSE200, BSE500, 10-Year Gsec.

Entry Load

A mutual fund may have a sales charge or load at the time of entry and/or exit to compensate the distributor/agent.

Entry load is charged at the time an investor purchases the units of a mutual fund. The entry load is added to the prevailing NAV at the time of investment. For instance, if the NAV is Rs. 100 and the entry load is 1%, the investor will enter the fund at Rs 101.

Note: SEBI, vide circular dated June 30, 2009 has abolished entry load and mandated that the upfront commission to distributors will be paid by the investor directly to the distributor, based on his assessment of various factors including the service rendered by the distributors.

Exit Load

Exit load is charged at the time an investor redeems the units of a mutual fund. The exit load is added to the prevailing NAV at the time of redemption. For instance, if the NAV is Rs 100 and the exit load is 1%, the investor will redeem the fund at Rs 99.

Modified Duration

Modified duration is the price sensitivity and the percentage change in price for a unit change in yield.

Standard Deviation

Standard deviation is a statistical measure of the range of an investment's performance. When a mutual fund has a high standard deviation, it means its range of performance is wide, implying greater volatility.

Sharpe Ratio

The Sharpe Ratio, named after its founder, the Nobel Laureate William Sharpe, is a measure of risk-adjusted returns. It is calculated using standard deviation and excess return to determine reward per unit of risk.

Beta

Beta is a measure of an investment's volatility Vis-a-vis the market. Beta of less than 1 means that the security will be less volatile than the market. A beta of greater than 1 implies that the security's price will be more volatile than the market.

AUM

AUM or assets under management refers to the recent / updated cumulative market value of investments managed by a mutual fund or any investment firm.

Holdings

The holdings or the portfolio is a mutual fund's latest or updated reported statement of investments/securities.

These are usually displayed in terms of percentage to net assets or the rupee value or both. The objective is to give investors an idea of where their money is being invested by the fund manager.

Nature of Scheme

The investment objective and underlying investments determine the nature of the mutual fund scheme. For instance, a mutual fund that aims at generating capital appreciation by investing in stock markets is an equity fund or growth fund. Likewise, a mutual fund that aims at capital preservation by investing in debt markets is a debt fund or income fund. Each of these categories may have sub-categories.

Rating Profile

Mutual funds invest in securities after evaluating their creditworthiness as disclosed by the ratings. A depiction of the mutual fund in various investments based on their ratings becomes the rating profile of the fund. Typically, this is a feature of debt funds.

Total Return Index

Total return index calculation consider the actual rate of return of an investment or a pool of investments over a given evaluation period. Total return includes interest, capital gains, IDCW*s and distributions realized over a given period of time.

CAGR

CAGR (Compound Annual Growth Rate) is the annual rate of return on an investment over a specified period of time, assuming the profits were reinvested over the investment's lifespan.

Product Suitability

Name of the scheme	Scheme Riskometer	Benchmark Riskometer NIFTY 100 TRI
